

Foam Marker Kit

Complete Kit for Turf and Row-Crop Sprayers

Part # 520004

FEATURES & BENEFITS

- Save money and increase efficiency by avoiding costly misses and overlaps while spraying
- No pre-mixing required; foam is made in the drop assembly at the end of the boom
- Fits any crop sprayer, turf sprayer or seeding machine (extra hose required for booms longer than 60 feet – part # 520000-751)
- Electro-pneumatically operated, requiring a 12-volt DC 6 Amp power supply
- 108' dual liquid/air hose with thermoformed polystyrene covering for UV protection

Hypro's Foam Marker Kit utilizes a specially designed diffuser that mixes the foam concentrate with air in the drop assembly, allowing you to cover up to 500 acres with only a 5-gallon tank, out performing other foam markers with larger tanks.

HYPRO® is a proud distributor of ARAG® products.

Foam Marker Kit

SPECIFICATIONS

Complete Kit for Turf and Row-Crop Sprayers

Relief valve (brass) and controller valve (stainless steel) for quick and accurate adjustments.

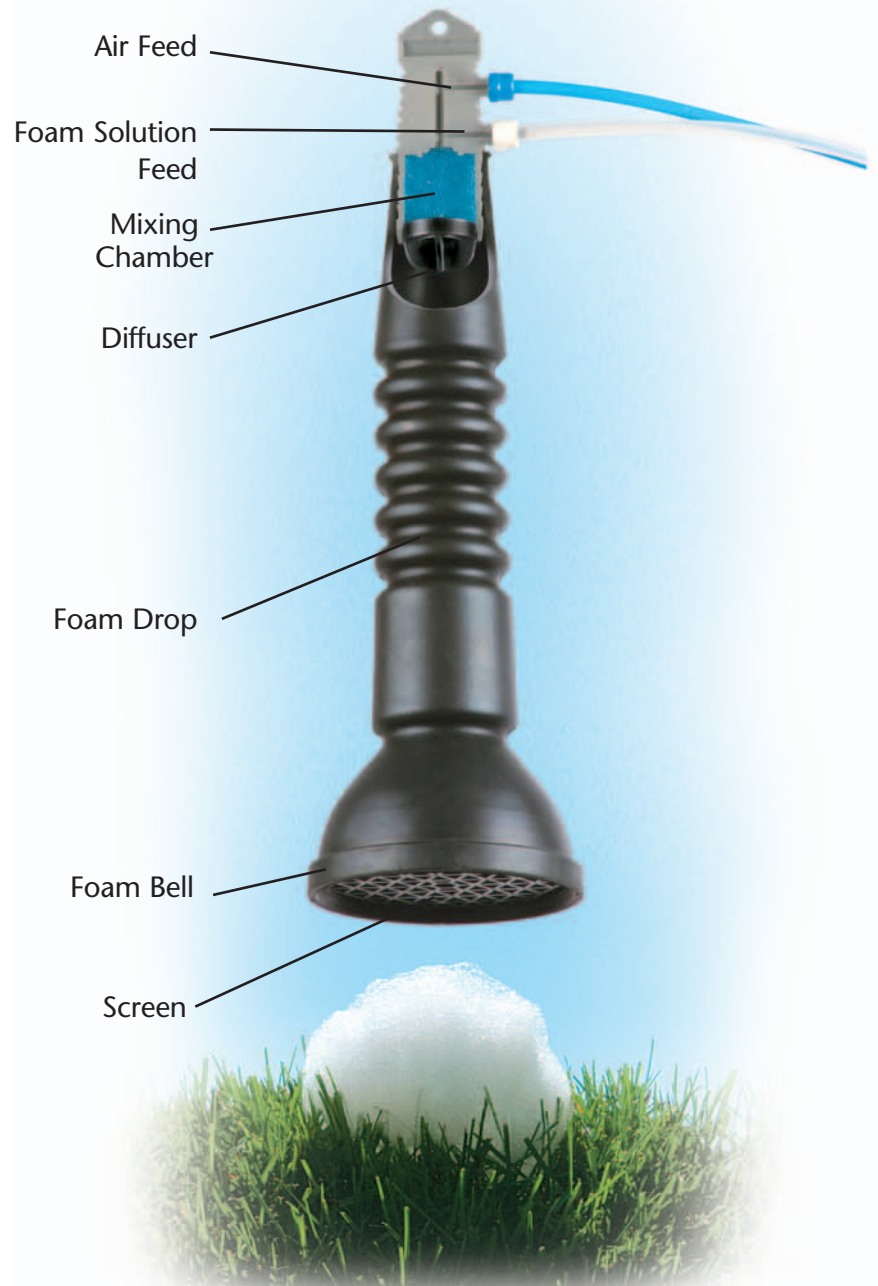

Simple "on-off" controller for easy operation from the cab.

Thermoformed polystyrene covering protects hoses that may become brittle from damaging UV rays.

The foam solution and air enters the drop assembly from separate tubes and combines in the mixing chamber to create the foam. This unique process of making the foam at the end of the boom allows Hypro's foam marker kit to cover more acres with a small tank.
